

# reBot-DevArm B601-DM

## ENGINEERING BUNDLE — Concept Phase

Architecture · Requirements · DFMEA · Test Plan · Safety Case · 2026-05-04 · [github.com/jherrodthomas/reBot-DevArm](https://github.com/jherrodthomas/reBot-DevArm)

**What's in this bundle.** Consolidated view of the concept-phase engineering package for the open-source 6-DOF cobot arm. Detailed evidence in the companion workbooks. Provisional acceptance: OE-1 only.

### Headline numbers

| Hazards | Safety funcs | Requirements | DFMEA modes | High-AP | Test cases | Open gaps |
|---------|--------------|--------------|-------------|---------|------------|-----------|
| 33      | 31           | 104          | 27          | 11      | 131        | 28        |

1. Architecture (5 views)

Five complementary architectural views per ISO/IEC/IEEE 42010:2022. Each view derived from the upstream Seeed-Projects/reBot-DevArm repository and assumptions flagged.

Figure 1 — System boundary & context (ISO 12100 §5).

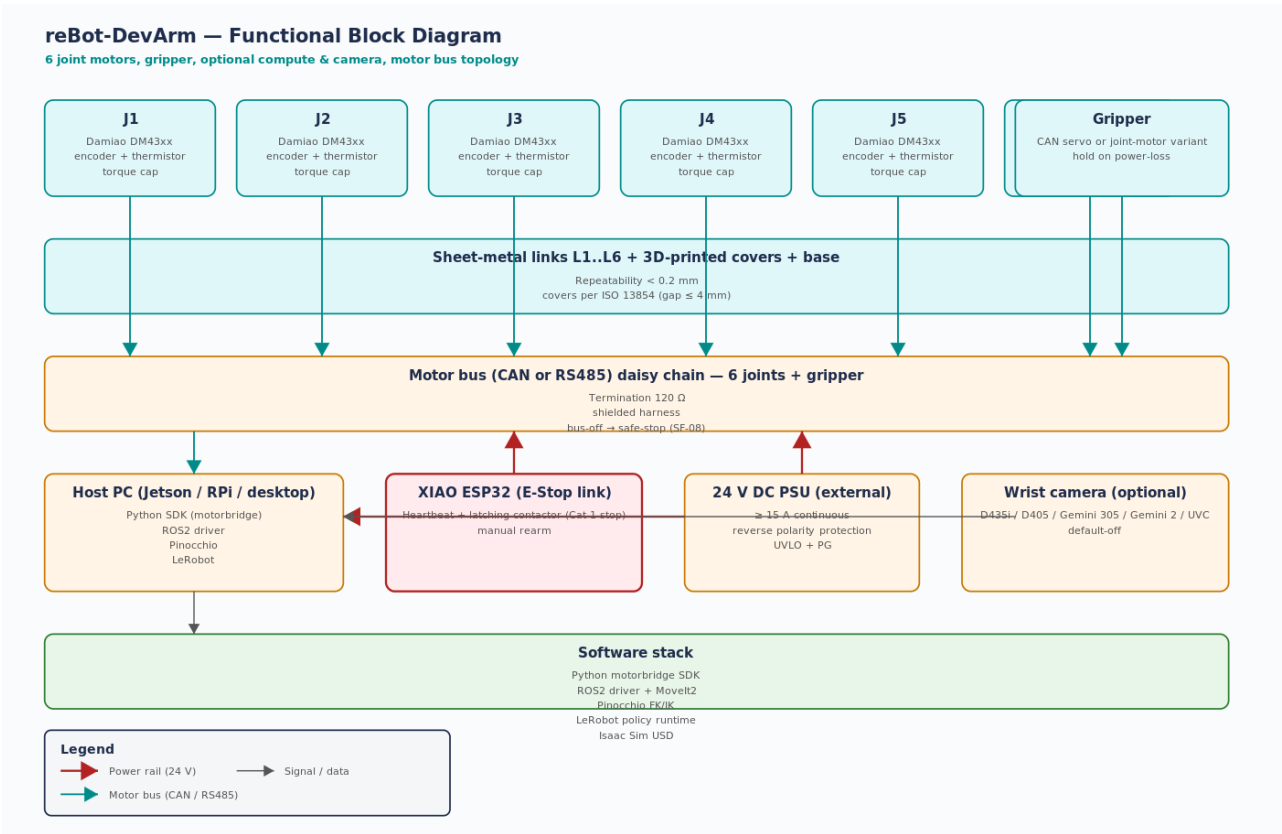

Figure 2 — Functional block diagram with motor bus, host, PSU, E-Stop.

Figure 3 — 31 safety functions allocated to HW (9), SW (15), Procedure (7).

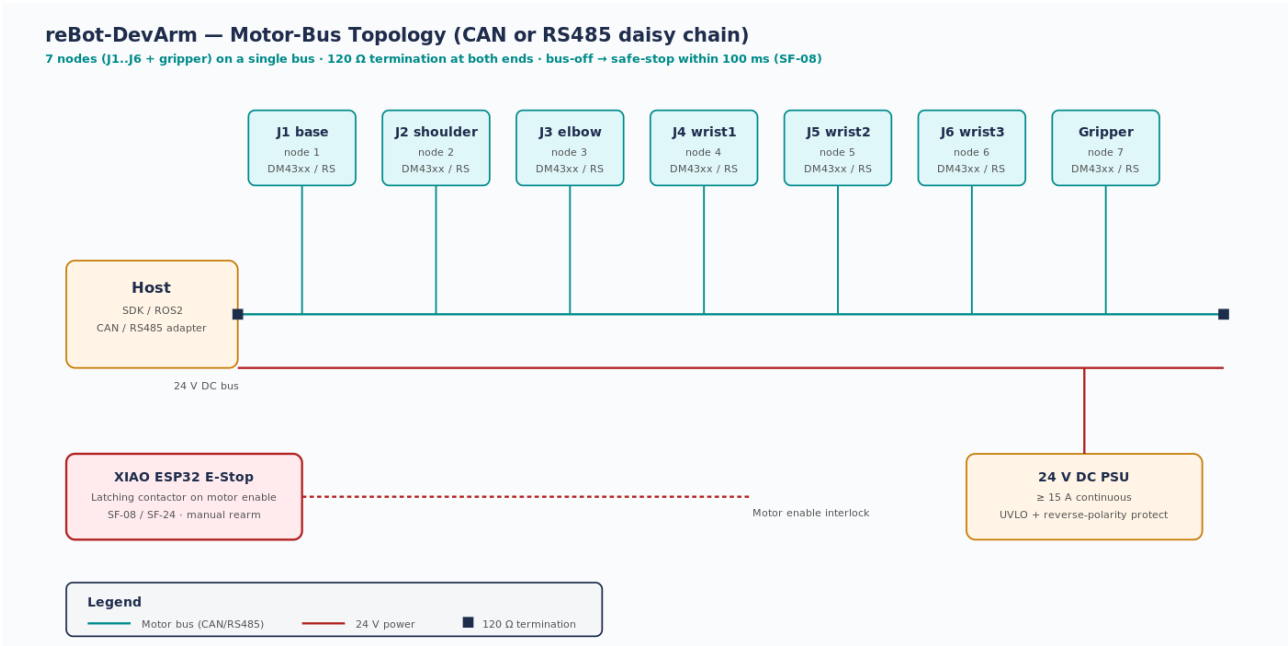

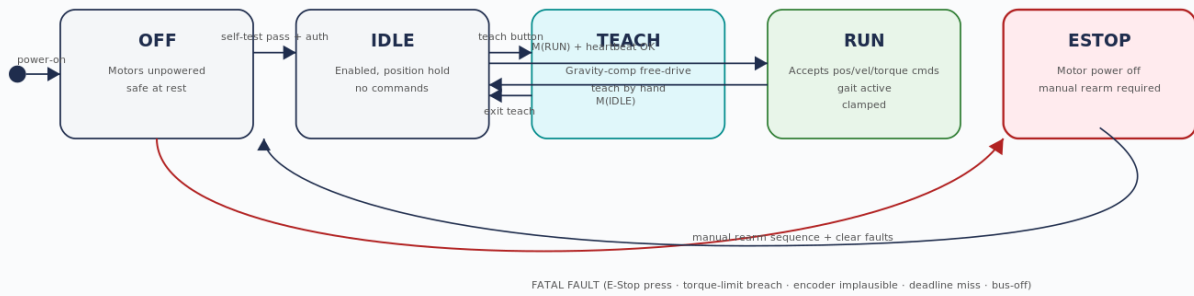

Figure 4 — Motor bus topology (CAN/RS485 daisy chain).

## reBot-DevArm — Mode FSM (OFF / IDLE / TEACH / RUN / ESTOP)

Watchdog and E-Stop gate every transition; default-on-fault is ESTOP

### Watchdog & E-Stop Gating (every transition)

- Heartbeat from controller required to enter or remain in RUN (250 ms timeout → SF-08)
- E-Stop interlock required at boot before motor enable (SF-08, SRS-023, FM-25)
- Encoder plausibility (SF-28) checked every cycle · joint torque/velocity clamp (SF-03) on every command
- Manual rearm only after ESTOP (SF-24) — no auto-restart

Figure 5 — Mode FSM (OFF / IDLE / TEACH / RUN / ESTOP).

## 2. Top safety requirements

| REQ-ID   | Type | Statement                                         | SF          | Tests    |
|----------|------|---------------------------------------------------|-------------|----------|
| SYRS-002 | SAFE | PFL per ISO/TS 15066                              | SF-01,SF-02 | TC-S-002 |
| SYRS-003 | SAFE | Joint torque limit                                | SF-03       | TC-U-001 |
| SYRS-005 | SAFE | Emergency stop $\leq 500$ ms; fail-safe link loss | SF-08,SF-13 | TC-S-004 |
| SYRS-006 | SAFE | Manual rearm after E-Stop                         | SF-24       | TC-S-005 |
| SYRS-008 | SAFE | Watchdog safe-stop on comms loss                  | SF-08,SF-25 | TC-S-006 |
| SYRS-014 | SAFE | Gripper hold on power loss                        | SF-13       | TC-U-007 |
| SYRS-026 | SAFE | Camera default-off + privacy                      | SF-31       | TC-Q-004 |
| SYRS-029 | SAFE | Pinch-zone gap $\leq 4$ mm                        | SF-07       | TC-U-015 |
| HWS-014  | SAFE | E-Stop dual channel                               | SF-08       | TC-S-041 |
| HWS-018  | SAFE | Keyed PSU connector                               | SF-10       | TC-U-059 |

### 3. Top High-AP DFMEA items

| FM    | Description                             | S  | O | D | AP | Mitigation                    | Linked gap   |
|-------|-----------------------------------------|----|---|---|----|-------------------------------|--------------|
| FM-16 | E-Stop button stuck / fails             | 10 | 3 | 4 | H  | Cat 3 dual channel            | GAP-10218-02 |
| FM-25 | E-Stop wiring not specified / installed | 10 | 4 | 3 | H  | Boot interlock with handshake | GAP-10218-02 |
| FM-24 | PFL not bound to joint torque caps      | 9  | 5 | 9 | H  | TS 15066 measurement          | GAP-15066-01 |
| FM-11 | Motor bus → bus-off                     | 8  | 4 | 4 | H  | Termination + safe-stop       | GAP-13849-01 |
| FM-01 | Motor runaway                           | 8  | 3 | 4 | H  | Cat 3 torque-monitor          | GAP-13849-01 |
| FM-18 | SDK race / GIL stall                    | 8  | 4 | 5 | H  | Deterministic core; watchdog  | —            |
| FM-20 | Tele-op auth bypass                     | 8  | 3 | 7 | H  | TLS+token+audit               | GAP-CYB-01   |
| FM-21 | LeRobot policy edge case                | 8  | 5 | 7 | H  | Coverage matrix               | GAP-LP-01    |
| FM-27 | Pinch-zone gap > 4 mm                   | 8  | 3 | 7 | H  | Cover redesign                | GAP-13854-01 |

**Recommendation.** Provisional acceptance for OE-1 only. Closing the top 10 gaps unlocks OE-1 unconditionally and OE-2 conditionally. OE-3/OE-4 require additional regulatory engagement.
